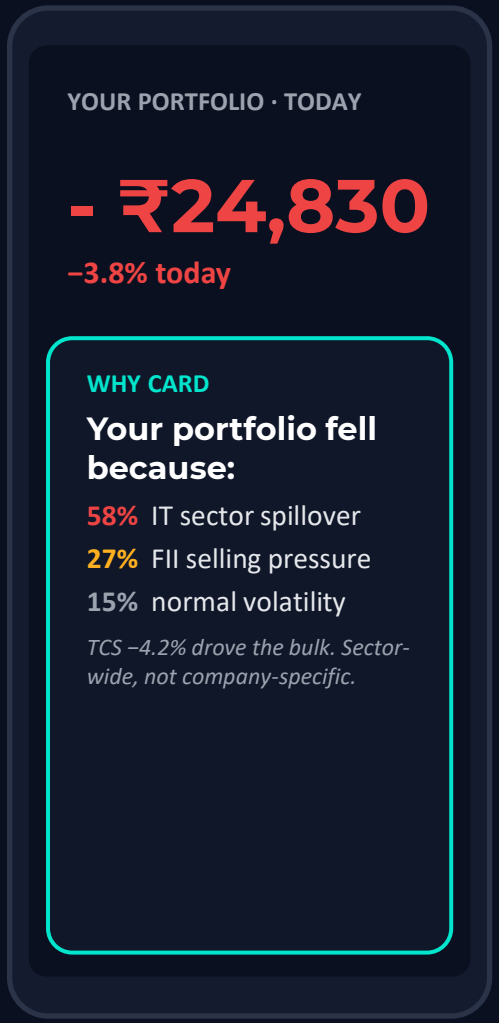
Move

AI that explains why your stock or portfolio moved

India lost ₹3 lakh crore in the market. Nobody explained why. Move does.



Personalized investing explainability for India's new retail investors

Kuppili Nikhilesh Raju
23R11A66H7
AIML - D

Retail investing exploded. Learning never did.

194M

demat accounts in India in 2025

up from 36M in 2019

90%+

retail F&O traders lose money

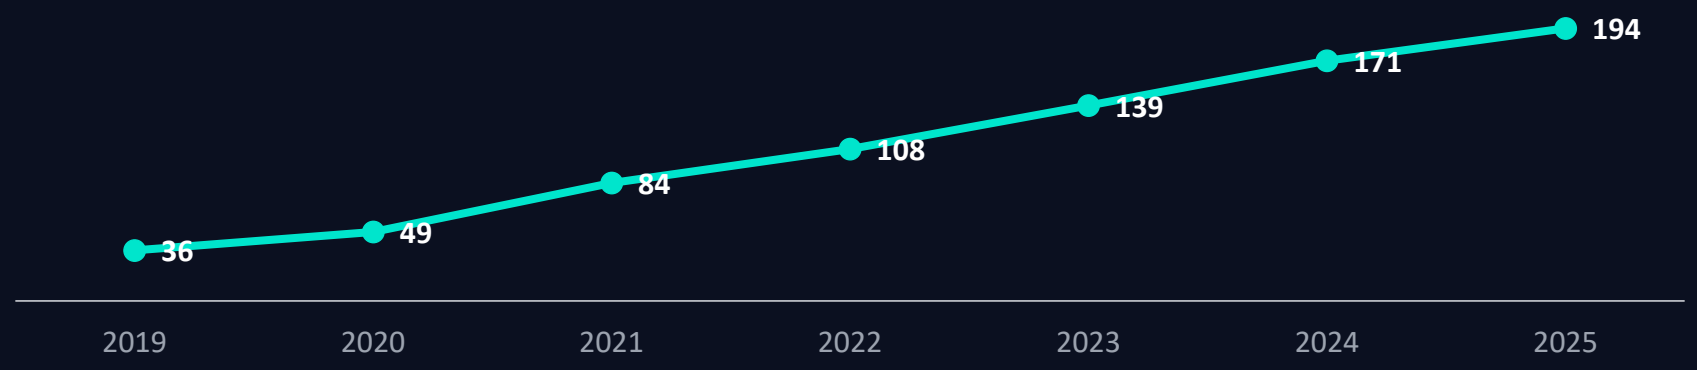
SEBI-linked reporting

₹1.05T

aggregate retail F&O loss

over 3 years

Demat accounts in India (millions)



The real problem is not loss. It's unexplained loss.

THE GAP

Today’s tools show prices, not reasons

Every product in the retail stack tells you *what* happened. None tell you ***why it happened to you***.

News apps

Headlines, not ranked drivers

You see 40 headlines a day. None tell you which of your holdings will move, or by how much. You are left to guess the causal chain.

Broker apps

Charts, not causal explanations

Zerodha, Groww, Angel One show you a red candle. They do not tell you it was 58% sector spillover, 27% macro, 15% noise.

Education platforms

Generic concepts, not your portfolio

Varsity teaches you what a P/E ratio is. Nothing teaches you why your trade today went wrong, or what pattern of yours caused it.

Institutional terminals

Too expensive, wrong audience

Bloomberg costs ₹20L/year and speaks to analysts. Nothing equivalent exists for a 25-year-old with a ₹50,000 portfolio in Telugu.

THE TAKEAWAY

No product closes the loop between a loss happening and a lesson being learned.

THE SOLUTION

Move is the why layer for Indian retail investors.

An AI that reads every market event, matches it to your portfolio, and turns price moves into plain-language lessons — in your language, on your phone.

01

Explain

Why did my portfolio move today?

A causal engine decomposes every move into stock, sector, and macro drivers — and explains it in one paragraph you can actually read.

02

Reflect

What can I learn from my last loss?

A Loss Ledger logs every losing trade with a post-mortem and behavioral tag — panic-sell, FOMO, over-concentration — so patterns become visible.

03

Grow

Am I actually getting better?

Literacy score and streaks track decisions against past lessons. Gamified feedback turns every market event into a compounding learning loop.

Explain → Reflect → Grow. **One loop, built for India.**

THE USER

Ravi, 26, on Budget Day.

Hyderabad. ₹80,000 portfolio. Telugu-first. Two years of trading. Zero causal framework.

WITHOUT MOVE Reaction

- Portfolio down 3.8% after Budget speech
- Three conflicting WhatsApp tips in 10 minutes
- Panic-sells TCS and HDFC Bank at the lows
- Locks in the loss. No idea why it happened.

Outcome: –₹9,400. No lesson learned.

WITH MOVE Reasoning

- Opens Move at 4 PM — sees today's Why Card
- Reads Telugu explanation: Budget-day FII selling, sector wide
- Sees 2014 & 2019 Budget recovery patterns in 7-14 days
- Loss Ledger reminds him: last panic-sell cost him 12%

Outcome: waits. Recovers. Pattern tagged.

Over time, Move replaces **reaction** with **reasoning**.

THE PRODUCT

Four features. One learning loop.

Each surface answers one question a retail investor actually asks — in their own language.

DAILY

Why Card

Why did my portfolio move today?

One-glance summary of the day's moves, ranked by driver: stock news, sector, macro — with source links.

ON-LOSS

Loss Ledger

What can I learn from my last loss?

Post-mortem on every losing trade with behavioral tags — panic-sell, FOMO, over-concentration. Patterns become visible.

ON-EVENT

Event Explainer

How does Budget Day affect my holdings?

Real-time read on macro events: Budget, RBI policy, FII flows, big earnings — filtered to your actual portfolio, not a generic view.

WEEKLY

Literacy Score

Am I actually getting better?

Tracks decisions against past lessons. Gamified streaks (e.g. "didn't panic-sell on shock") and a score that reflects improving investor judgment.

EXAMPLE WHY CARD “TCS fell 4.2% today — **58% sector spillover**, **27% macro/FII pressure**, **15% normal volatility**.”

HOW IT WORKS

A hybrid quant + AI explainability engine.

Statistics provide rigor. LLMs turn that rigor into explanations any 25-year-old can read.

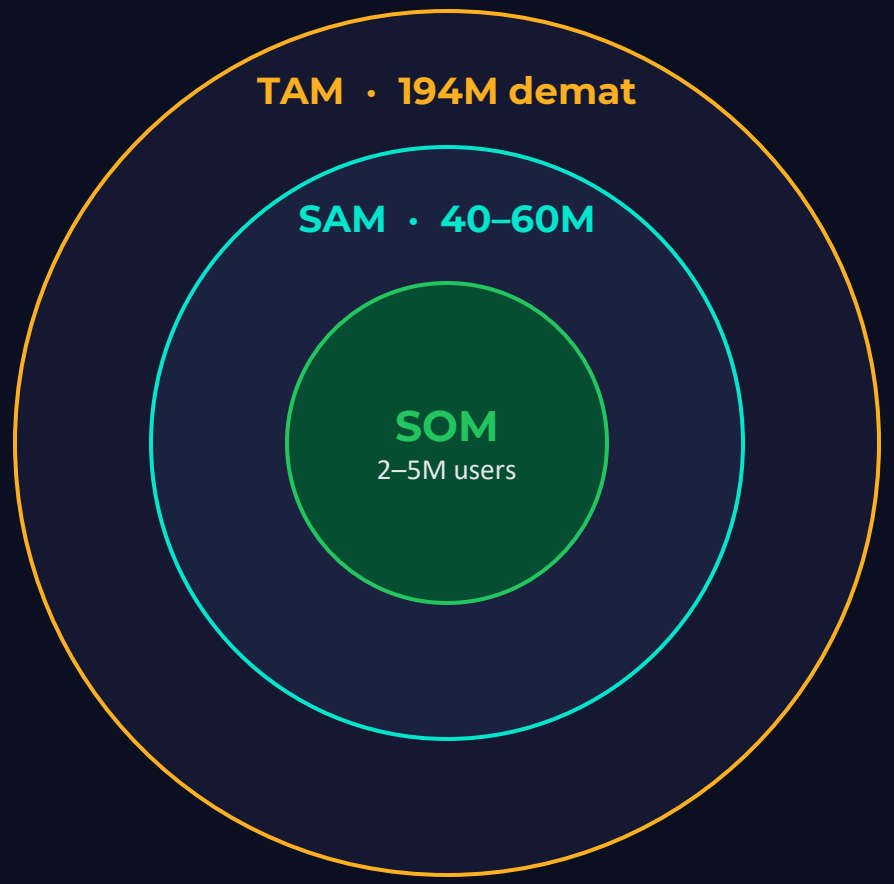
01	**Data Ingestion**	NSE/BSE prices, SEBI filings, earnings transcripts, RBI & macro data, news feeds, public sentiment.
02	**Causal Inference Engine**	Event studies, factor decomposition (market/sector/macro/momentum), attribution logic — the statistical backbone.
03	**Personalization Layer**	Your holdings, trade history, and behavior patterns — kept local. The same event, reframed for your portfolio.
04	**Delivery Layer**	Why Cards, loss lessons, event alerts — in English, Hindi, Telugu, Tamil, Bengali. App, push, WhatsApp.

Stats **explain**. AI **translates**. Your portfolio **grounds** it.

MARKET SIZE

A large and deeply underserved market

India’s retail investing base has scaled 4x in five years. The learning layer has not scaled at all.



TAM

India’s 194M demat accounts and broader investing universe — every retail participant who holds or trades securities.

SAM

40–60M active digital-first investors with smartphones, broker accounts, and willingness to pay for better insights.

SOM

2–5M paying users in 3 years

Sources-
Business Standard — "Retail participation in markets increase; demat accounts surge to 194 million" (July 2025)- *URL:* business-standard.com

BUSINESS MODEL

Start with users. Expand into infrastructure.

Three revenue layers unlock over three years — each compounds the next.

YEAR 1

Freemium consumer

₹199 / month premium

Free daily Why Card. Paid deep analytics, Loss Ledger, and multilingual explainers.

YEAR 2

B2B2C broker partnerships

₹50L–5Cr / broker / yr

Zerodha, Groww, Angel One, Upstox integrations. Per-user licensing to the brokers.

YEAR 3

Institutional & literacy

Exchanges, CSR mandates, SEBI-aligned literacy programs, ecosystem partners.

Consumer trust becomes **infrastructure leverage**.

COMPETITION

Competitive Analysis

Others partially touch the problem. Move is the only product built end-to-end for it.

	Explains WHY	Portfolio-aware	India-specific	Multi-lingual Support	On-device
News apps	○	—	○	○	○
Broker apps	—	○	○	—	○
Generic AI	○	—	—	○	○
Institutional	○	○	—	—	—
Move	✓	✓	✓	✓	✓

● Yes ○ Partial — No

Move owns the one column that matters most: **the why**.

MOAT

Why this gets stronger over time

Four layers of defensibility that compound with every event, user, and explanation.

INDIA-SPECIFIC

Causal knowledge graph

Every earnings report, budget, RBI action, and filing feeds a structured graph of what moves Indian equities and why.

PERSONALIZATION

User & trade memory

Each user's holdings, trades, and behavior patterns train a model that gets sharper the longer they stay.

LANGUAGE EDGE

Language-trained AI

Proprietary dataset of financial explanations in Hindi, Telugu, and more — training data no competitor owns.

TRUST EDGE

Privacy-first architecture

Sensitive portfolio context stays local. A credibility moat in a market burned by data leaks and tip leaks.

Every event, every user, every explanation **compounds the advantage**.
